
Background

On Sunday the 9 November at approximately 17:42, a power event was experienced at the West Cambridge site for a period of 45 seconds or so. Rather than this being a total loss of power, it is being classified as a power dip.

The UPS-protected services at the West Cambridge Data Centre and Roger Needham Building detected the event and kept the facilities online via their battery backups.

The power system within the Soulsby facility detected the power dip and switched the server room to the UPS power feed. During this switching process it is estimated that 50% of the RCBO power breakers at the Soulsby site tripped, causing outages to a number of key UIS, Library and Astronomy systems.

The site was visited at 20:30 following notification from security at 20:00 that power had been lost earlier in the evening.

Impact

A number of UIS, Astronomy and Library systems were affected by the power issue at the Soulsby facility, these included:

EDM All services unavailable until Monday AM (loss of Database and application servers)
BizTalk
Sharepoint Single server failure, others available
BMS All server required intervention
ICE VLE
Drupal
Cognos 8 Live Data refresh failed, reporting data from a day old
Cognos 8 Dev Unavailable to 9pm due to loss of database
Cognos 10 Data refresh failed, reporting data from a day old
Apex Unavailable to 9pm (9/11/14) due to loss of databases and application server
Digitary Unavailable to 9pm (9/11/14) due to loss of databases and application server
CamCORS Unavailable to 9pm (9/11/14) due to loss of databases and application server
CARD Unavailable to 9pm (9/11/14) due to loss of databases and application server
Pensions Unavailable to 9pm (9/11/14) due to loss of database
CHRIS Unavailable to 9pm (9/11/14) due to loss of databases and application server
SbSsw1 Two failed network ports (impacted Cognos 10 servers)
UFS Loss of secondary application server and standby server. Datamart not updated.
MFD A small number of multi-function print devices in RNB needed to be restarted
CamTools Unavailable for 50 minutes whilst systems brought back online
Moodle Accessibility issues with file uploads.
CamSIS Unavailable until Monday AM (application connections broken)

CamSIS was unavailable between 17.42 Sunday until approximately 07.00 Monday when the application links to the database were refreshed. During this time period CamSIS batch processes also failed to run including imports from external systems e.g. UCAS.

These processes were placed on hold after bringing the application back up so that they could be manually restarted in a controlled fashion (taking in to account pre-requisite processes and load on the production system).

First line support received a number of calls from administrative users reporting access issues relating to applicants being unable to connect to CamSIS during this time.
**Investigation**

During this switching process it is estimated that 50% of the RCBO power breakers at the Soulsby facility tripped causing outages to a number of key UIS, Library and Astronomy systems.

The below messages were reported by the UPS.

11/09/2014,17:42:38, UPS on battery
11/09/2014,17:42:38, Buzzer is on (new alarm)
11/09/2014,17:42:40, Synchronization error
11/09/2014,17:42:40, Rectifier off
11/09/2014,17:42:40, Battery discharging

11/09/2014,17:43:05, UPS on mains
11/09/2014,17:43:07, Output normal
11/09/2014,17:43:10, Buzzer off
11/09/2014,17:43:11, Bypass OK
11/09/2014,17:43:12, Rectifier on
11/09/2014,17:43:12, Battery charging
11/10/2014,07:00:16, SelfTest failed
11/10/2014,07:00:33, SelfTest could not be started.

**Recommended Action**

1. Additional investigation by the Estates Management team needs to be undertaken with regards to the breakers tripping and the errors reported on the UPS.
2. A list of institutional contacts for the Soulsby facility should be generated.
3. Alerts either via Security or automated should make team members aware of a loss of power.
4. Revisit RNB PDU’s that were moved to mains supply following previous building outage.
